INDEX TO VOLUME 43

ARTICLES

Academic and Teaching Background of Secondary Science Teachers in the State of Ohio, The, Charles L. Koelsche, 134–139.

American Doctoral Dissertations On Scientific and Mathematical Education in Foreign Countries, Walter Crosby Eells, 274–275.

Analysis of Conservation Education in Curriculums for Grades K-12, U.S.A., An, Elizabeth Hone, 290–311.

Analysis of the Mathematical Concepts Necessary for the College Physical Science Course, An, Herbert Hannon, 51–55.

Anna May Gemmill, Clarence M. Pruitt, 285–286.

Annual Meeting of the Association for the Education of Teachers in Science, 69–70.

Approach to Teaching Facts and Attitudes in the Junior High School About the Human Life Span, An, William E. Hug, 458–460.

Brief Look at the History of Science Education in America: Its Past, Present, and Future, A, Orval L. Petersen, 427–435.

Collegiate Department of Science Education: Its Function and Importance, Richard A. Smith, 454–457.

Comparison of the Effectiveness of a Lecture Method and a Small-Group Discussion Method of Teaching High School Biology, A, Harold A. Taylor, 442–446.

"Continental Classroom" and the Small Science Department, Archie L. Lacey, 394–398.

Course in Contemporary Developments in the Sciences and Mathematics, A, Anton Postl, 407–409.

Creativity: Some Aspects and Implications, Orval L. Petersen and James T. Robinson, 420–427.

Curriculum—Makers Emphases in Elementary School Science, 1940–1952, M. Ira Dubins, 318–324.

Curriculum for the Talented Student in Biology, A, Jerome Metzner, 41–45.

Development in Process: The Science Curriculum in the Whittier Union High School District, A, Elizabeth A. Pellett, 409–414.

Development of a Program of Science Education in Thailand, The, Elwood D. Heiss, 215–218.

Discussion of the Rationale and Previous Findings of the "Is of Identity" Test as a Basis for Further Research, Thomas M. Weiss, 181–183.

E. Bernice Owens, Clarence M. Pruitt, 374.

Education in Burma: No Blackboard Jungle, Frank E. Wolf, 263–267.

Education in Liberia, Marvin David Solomon, 221–227.

Effect of Various Weightings of Factors by Which Excellence of Courses of Study May Be Determined, M. Ira Dubins, 328–335.

Elementary Science a New Discipline and a Growing Responsibility of the Teacher Training School, R. H. Simmons, 336–342.

Elementary Science in Connecticut, 1850–1900, Louis I. Kuslan, 286–289.

Evaluation of Objectives in Science Teaching, Clarence H. Nelson, 20–27.

Evaluation of the Introductory Physics Course on Film, An, Kenneth E. Anderson and Fred S. Montgomery, 386–394.

Evaluation of the 1958 Summer Institutes Attended by the Science and Mathematics Teachers from the New York City High Schools, Samuel Schenberg, 114–121.

Experiences in a Summer Science Institute, Gwendolyn S. Barnett, 112–114.

Experiences with a Physical Science Course at the Tenth Grade, Nelson L. Lowry, 61–64.

Experimental Study in Teaching High School Biology in the Cincinnati Public Schools, An, James N. Jacobs and Joan K. Bollenbacker, 399–405.

Experimenting with an Acid Chamber, Clark C. Hudson, 405–406.

Functional and Specific Laboratory Program for a General Education Course in the Earth Sciences, A, Alan Lutz, 177–178.

General Science in the Secondary Schools, James T. Robinson, 415–420.

Geographical View of What Is Being Done to Improve Elementary Science Instruction in the United States, A, M. Ira Dubins, 324–328.

H. Emmett Brown, Clarence M. Pruitt, 189–191.

High School Biology: Its Contribution to Health Education, Virginia Ramsdell Childs, 435–436.

How Can the Curriculum for High School Biological Science Teachers Be Improved?, R. Maurice Myers and H. William Crall, 147–152.

Identification and False-to-Fact Notions, Thomas M. Weiss, 185–187.

Identification Restricts Problem Solving, Thomas M. Weiss, 184–185.

Impressions of Science Teaching in Three Countries, H. Emmett Brown, 192–196.

Independence Study of Choice of Science or Non-Science Major as Related to Ability and Interest Test Scores, An, Edwin A. Vineyard, 125–129.

Interest in Natural History Teaching in New Zealand, Fiji, England, Norway, Sweden, and Denmark, E. Laurence Palmer, 199–206.

John Henry Jensen, Clarence M. Pruitt, 383–385.

Kenneth B. M. Crooks, Clarence M. Pruitt, 275–277.

Laboratory Study in Radioactivity Designed to Examine Reaction to Unexpected Experimental Results, A, Walter S. Lundahl, 153–155.

Mathematical Processes Needed in Learning High-School Chemistry and High-School Physics, The, J. Bryce Lockwood, 56–60.

Mrs. Otis W. Caldwell-Clarence M. Pruit, 449.
Myrtle Elizabeth Johnson, Clarence M. Pruitt, 85–88.
Objectives of Science Teaching, Evaluation of, Clarence H. Nelson, 20–27.
Official Minutes of the Thirty-First Annual Meeting of the National Association for Research in Science Teaching, Clarence M. Pruitt, 80–82.
On the State of Physics Teaching in the Russian Republic, G. P. Evronin, 270–274.
Participation in Education of Secondary School Science Teachers in Egypt, Samuel Ralph Powers, 196–199.
Personality Aspects Related to Misinformation About Sex among College Students, Dolores Elaine Keller, 156–163.
Personality Aspects Related to Misinformation About Sex among College Students: Questionnaire Analysis, Dolores Elaine Keller, 163–168.
Physical Science in the Junior College or the Lower Division of a University, Helen M. Merrill, 174–177.
Preparation of a Regional Industrial Information Manual for Science Teachers, The, Ernest E. Snyder, 447–449.
Program of the Thirty-First Annual Meeting of the National Association for Research in Science Teaching, 77–79.
Proposed Program of Physical Science Education for Non-Science Students, A, Elman A. Morrow, 64–69.
Report of the Association for the Education of Teachers in Science, Abe Fischler, 70–73.
Report to the N.A.R.S.T. on the Relationships with the American Association for the Advancement of Science for the Year 1957–58, George Griesen Mallinson, 73–77.
Results of a Junior High School Interest Survey, Thomas L. Bagshaw, 452–454.
Richard Ralph Armacost, Clarence M. Pruitt, 277.
Science and Education, the Science Masters' Association, Great Britain, 236–239.
Science and Its Role in a Liberal Arts College in the Atomic Age, Clarence W. Wright, 140–146.
Science Background of Liberal Arts Graduates, Jacob Tuckman, 463–464.
Science Education and Technical Cooperation with Special Reference to Afghanistan, Willard J. Jacobson, 245–256.
Science Education in Burma and the Fulbright Program, Charles Walker Prewitt, 257–263.
Science Education in Libyan Secondary Schools, Vernon C. Lingren, 219–221.
Science Education in the Philippines, Earl R. Glenn, 207–214.
Science Education in the Space Age, Bowen C. Dees, 6–11.
Science Fiction as a Factor in Science Education, Elizabeth H. Gross and John H. Woodburn, 28–31.
Science in the Training Schools, Louis I. Kuslan, 343–345.
Science Manpower Project, The, Frederick L. Fitzpatrick, 121–125.
Science Teaching and General Educational Implications in India—1959, Stanley B. Brown and L. Barbara Brown, 240–244.
Science Teaching Improvement Program of the American Association for the Advancement of Science: An Evaluation, The, John W. Gustad, 89–98.
Science Teaching in German Secondary Schools, Erwin A. Baurmann, 268–270.
Select Bibliography for a Seminar in Evolution, Joseph C. Daniel, Jr., 460–462.
So You're Going to Teach Physics: From an Older Physics Teacher to a Younger, Prospective One, Rebecca E. Andrews, 437–442.
Space Age, Science Education In, Bowen C. Dees, 6–11.
Student Reactions to High School Science, R. R. Haun, 45–50.
Study of the Independence of Choice of Science or Non-Science Major and Measures of Personality Traits, A, Edwin E. Vineyard, 130–133.
Study of the Possible Learnings Resulting from Science Experimentation by a Class of First Grade Children, A, Mary Elliott Jones, 355–374.
Study of the Relationship of Specified Abilities in Chemistry to Each Other and to Intelligence, A, Marjorie Ruth Porter and Kenneth E. Anderson, 12–19.
Teaching Gas Law Problems in High School Science, Mennow M. Gunkle, 168–174.
Techniques and Devices for Microprojecting, Frank E. Wolf, 107–112.
Ten Points to Scientific Supremacy, Frank E. Wolf, 98–106.
Then and Now in Science Education: A Consideration of Speculative and Operative Approaches, William Gould Vinal, 179–181.
Thomas Petigru Fraser, Clarence M. Pruitt, 3–5.
Three Classroom Procedures for Presenting the Concept of "Mechanism" in Biology, Mervin E. Oakes, 32–34.
Training of Science Teachers in the Department of Education, Manchester University, Frank Gorner, 228–236.
Traits of Scientists, Samuel Strauss and Henry Brechbill, 35–41.
Warren W. McSpadden, Clarence M. Pruitt, 277.
What Do Our Schools Mean By Conservation Education?, Martha E. Munzer, 312–318.
Who Is Interested?, Roy M. Johnson, 450–452.
Would Publicity Help?, Thomas M. Weiss, 342–343.

AUTHORS

ANDERSON, KENNETH E. AND FRED S. MONTGOMERY, An Evaluation of the Introductory Physics Course on Film, 386–394.

——— AND MARJORIE RUTH PORTER, A Study of the Relationship of Specified Abilities in Chemistry to Each Other and to Intelligence, 12–19.

ANDREWS, REBECCA E., So You're Going to Teach Physics: From an Older Physics Teacher to a Younger, Prospective One, 437–442.
